

DOYMA puts the seal on protection systems

DOYMA is a world-leading manufacturer of sealing and fire protection systems, offering professional and innovative preventative measures against structural damage utilising the very best in German engineering.

The company's products are used to seal penetration points through walls and floors to permanently prevent any infiltration of gases and water into the building, and the DOYMA products are guaranteed for 25 years. With over 40 years' experience, DOYMA has created a range of products to suit all situations for power cables, communications cables, pipes and ducts, including district heating pipes.

To showcase this tradition of excellence, DOYMA has released a comprehensive new brochure that covers the company's extensive product range and highlights the skills and experience of the team.

The full-colour brochure also reinforces the importance of DOYMA's range to the long-term future of buildings, with full technical specifications of products.

Little attention is given to the ducting and sealing of pipes and cables that pass through walls and ceilings until it is too late and structural damage has already occurred. DOYMA sealing systems can help save building owners a lot of problems, such as damage to valuable equipment by water ingress, as well as provide substantial cost savings by eliminating high repair costs.

Increasingly, it is becoming general practice to include sealing systems in the standard specifications for buildings. DOYMA's systems are suitable for a wide variety of projects and requirements, such as safeguarding electricity supplies and helping to protect buildings that need to be in operation 24/7, such as airports.

DOYMA operates in the three core fields of expertise of civil engineering, building services and energy supply and provide the market with ducting systems for pipes and cables, single and multi-service house ducts for supply lines and fire protection products for preventive structural fire protection.

DOYMA's new Delivery Programme 2015 serves as a comprehensive reference manual for the selection and installation of duct sealing systems for all building services. Just Simply Safe encapsulates the DOYMA philosophy and illustrates both sealing methods and installation procedures appropriate for different types of construction and with diverse tanking membrane systems.

Both first-fit and retrofit systems are available in the DOYMA range and all meet DIN standards and have been proven on site so the warranty conditions are met and validated.

The DOYMA warranty is insurance company backed and compensates customers with up to €110,000 for every product installed to cover the cost of replacement and consequential loss suffered as a result of a product failure.

Interflow also has a CIBSE accredited CPD programme - Preventing Structural Damage - illustrating how various service duct sealing products aid compliance with BS 8102 - code of practice for protection of below ground structures against water from the ground.

To book a CPD presentation or to obtain a copy of the 2015 edition of the DOYMA Delivery Programme contact Interflow on 01952 510050 or sales@interflow.co.uk.
